Professional Summary

Final-year B.Sc. Computer Science student skilled in SQL, Python, Excel and Power BI. Able to clean and analyze data, write SQL queries and build interactive dashboards that turn raw data into clear business insights.Seeking entry-level data and analytics roles.

Technical Skills

Languages: Python, SQL (PostgreSQL)
Data Analysis: Pandas, NumPy, Statistics, Data Cleaning, EDA
Visualization & BI: Power BI, Matplotlib, Seaborn
Excel: Pivot Tables, Power Query, VLOOKUP, SUMIFS
SQL Concepts: Joins, Subqueries, CTEs, Window Functions
Machine Learning: Scikit-learn (basics)
Tools: Git, GitHub, Jupyter Notebook
AI Tools: ChatGPT, Claude (prompt engineering for code debugging and data analysis)

Projects

Credit Card Analytics Dashboard | *PostgreSQL, Power BI, DAX* - GitHub
- Built a 2-page Power BI dashboard (Transaction and Customer reports) analyzing 656K transactions and $55.32M revenue by card category, spend type and customer demographics.
- Loaded raw CSV data into PostgreSQL, connected it to Power BI and created DAX measures (Revenue, WoW Revenue, Age/Income Group) with data modeling across tables.
- Found that Blue cards drive $46M of revenue and the 40–50 age group is the top segment; added slicers, cross-filtering and drill-down for exploration.

Customer Shopping Behavior Analysis | *SQL, Python, Power BI* - GitHub
- Analyzed a customer shopping dataset using SQL queries and Python (Pandas) to study purchase patterns by category, age group and gender.
- Built an interactive Power BI dashboard with KPI cards, slicers and pie, donut, bar and line charts.
- Derived actionable insights on customer segments and category-wise spending to support targeted marketing and sales decisions.

E-Commerce Sales Analysis | *SQL (PostgreSQL)* - GitHub
- Solved 10 business questions on a 4-table e-commerce schema (Customers, Products, Orders, OrderItems) using multi-table JOINs, GROUP BY/HAVING and subqueries.
- Applied window functions (RANK, SUM OVER, LAG) to compute running revenue totals and month-over-month growth.
- Identified top 5 customers, repeat buyers, never-ordered products and city-wise average order value.

Internship

Data Science Intern (Star Performer) [Feb 2026 – Mar 2026]
Oasis Infobyte (OIBSIP, AICTE Program) *Remote*
- Developed a Sales Prediction model using Python and Linear Regression to predict sales based on advertising expenditure.
- Performed data cleaning, preprocessing, and exploratory data analysis (EDA) using Pandas, NumPy, and Matplotlib.
- Trained and evaluated the Machine Learning model using Scikit-learn and analyzed prediction performance.

Education

K. K. Wagh ACS & CS College, Nashik 2024 – 2027
B.Sc. Computer Science (Savitribai Phule Pune University)
Kanishtha Mahavidyalaya, Lohoner - 2024
HSC (12th Science)
Janata Vidyalaya, Lohoner - 2022
SSC (10th)

Certifications

Data Analytics Job Simulation, Deloitte (Forage)
Data Analysis with Python (IBM)
